INTERNET-DRAFTS REQUEST FOR COMMENTS (RFC) WORKING GROUPS

Internet-Drafts are working documents of the IETF, its areas, and its working groups. During the development of a specification, draft versions of the document are made available for informal review and comment by placing them in the IETF's Internet-Draft

BGP Auto Discovery

This document describes a method for automating portions of a router's BGP configuration via discovery of BGP peers with which to establish further sessions from an initial "bootstrap" rou...

Mission and principles

The mission of the IETF is to make the Internet work better by producing high quality, relevant technical documents that influence the way people design, use, and manage the Internet.

KEY INFO

IN DEPTH

The Internet Engineering Task Force ([IETF](#)) is a large open international community of network designers, operators, vendors, and researchers concerned with the evolution of the Internet architecture and the smooth operation of the Internet. It is open to any interested individual. The IETF Mission Statement is documented in [RFC 3935](#).

The actual technical work of the IETF is done in its working groups, which are organized by topic into several areas (e.g., routing, transport, security, etc.). Much of the work is handled via [mailing lists](#). The IETF holds meetings three times per year.

The IETF will pursue this mission in adherence to the following cardinal principles:

- Open process
- Technical competence
- Volunteer Core
- Rough consensus and running code

Who we are

The Internet Engineering Task Force (IETF) is a large open international community of network designers, operators, vendors, and researchers concerned with the evolution of the Internet architecture and the smooth operation of the Internet.

[Twitter](#) [Facebook](#) [YouTube](#)

KEY INFO IN DEPTH

KEY INFO

The IETF working groups are grouped into areas, and managed by Area Directors, or ADs. The ADs are members of the Internet Engineering Steering Group (IESG). Providing architectural oversight is the Internet Architecture Board, (IAB). The IAB also adjudicates appeals when someone complains that the IESG has failed. The IAB and IESG are chartered by the Internet Society (ISOC) for these purposes. The General Area Director also serves as the chair of the IESG and of the IETF, and is an ex-officio member of the IAB.
