Major Components of I2NSF

Major Components as Shown in the Draft

Changes in This Version

- Main diagram better aligned with the current terminology and the rest of the document
 - Including the ‘developer’ vs ‘vendor’ issue
- Document flow improved seeking for a better internal consistency
 - Better glue among the different original contributions
 - Though some pruning and grafting may be still needed
- Sections incorporated from the attestation draft
 - On threats
 - On requirements of the client-controller interface
 - The attestation draft makes direct references to these sections now

What Comes After

- Consolidate alignment with other directly related drafts
 - Terminology
 - Use cases
 - Gap analysis
- Pruning and grafting
 - Possibly with requirements from other documents
 - And a (final) assessment on the structure
 - Would we require some fresh eyes?
- Keep the bush growing to a fruitful tree
