RESTCONF Configuration for LMAP

- Issue:
 - The document should likely explain how a RESTCONF server can be configured for use with LMAP (i.e., call home, credentials, etc)
 - If so, we cannot wrap this document up until the corresponding work in the NETCONF WG is stable
 - Might be good to have implementation experience
- Options:
 - Give this document more time, focus on the other two I-Ds for now to get them into the IESG
 - Do not attempt to explain how the various pieces fit together
 - Drop the whole document since how RESTCONF can be used follows from the RESTCONF documents
