Terminology for Constrained-Node Networks

RFC 7228 bis?

Carsten Bormann 2016-07-22
Updating RFC 7228 (May 2014)

• Has the world moved?

• Is terminology missing?
Terminology for platforms

- A-class (L-class?) vs. M-class
- Higher classes within M-class (Class 3, 4, 5)? Subclasses (1a/b/c = 128/8, 128/16, 256/16)?
- Crypto capabilities?
- Protection capabilities (MPU, MMU, …; Kernel/User; TrustZone/Secure Element; tamper-proof…)?
Power constrainedness

- Terminology such as E0 or P0 was added late to RFC 7228 — how successful is that?
- Are there “classes” for Ps and Et?
Terminology for networks

- MTU-constrainedness (1500+, 500, 128, 27, 12, 8)
- millibit characteristics
- asymmetry (e.g., powerful base stations vs. constrained devices; powered mesh routers; …)
- mobility (building networks vs. BANs vs. Logistics)?
