

Proposed Work Split

(for proposed wg)

Four Initial Documents

draft-hamilton-quick-transport-protocol

core transport protocol description, including connection establishment, multistreaming, flow control

Four Initial Documents

draft-hamilton-quic-transport-protocol

core transport protocol description, including connection establishment, multistreaming, flow control

draft-iyengar-quic-loss-recovery

congestion control and loss recovery mechanisms for QUIC

Four Initial Documents

draft-hamilton-quic-transport-protocol

core transport protocol description, including connection establishment, multistreaming, flow control

draft-iyengar-quic-loss-recovery

congestion control and loss recovery mechanisms for QUIC

draft-thomson-quic-tls

using TLS for QUIC's crypto handshake

Four Initial Documents

draft-hamilton-quic-transport-protocol

core transport protocol description, including connection establishment, multistreaming, flow control

draft-iyengar-quic-loss-recovery

congestion control and loss recovery mechanisms for QUIC

draft-thomson-quic-tls

using TLS for QUIC's crypto handshake

draft-shade-quic-http2-mapping

mapping HTTP/2 semantics over QUIC

Scope and Area

QUIC is largely transport work

goal is to produce general purpose transport, hence in TSV mapping of HTTP/2 semantics to QUIC is useful design driver documents are intertwined and will co-evolve
