CODEMATCH

http://cm.labs.lacnog.org/codematch/

CodeMatch Developer: Matheus Prola
CodeMatch Project Manager: Wanderson Paim
CodeMatch Team: codematch-develop@ietf.org

CodeMatch Objectives

- Link existing implementations to standards & I-D
- Showcase opportunities to develop running code for IETF protocols.

brings together students, researchers, professors, open source development communities, vendors with proprietary implementations, and consumers of code bases.

How CodeMatch works

1. Project owners (code) can directly create links to the appropriate drafts or RFCs that they have implemented

2. Opportunities to develop code for drafts or standards are listed as "CodeRequests" established by a sponsor or 'mentor' for that "CodeRequest"

The relationship will open up collaboration opportunities with the IETF standards editor and a designated IETF CodeMatch project mentor along with other developers who may grapple with the same questions in the development of their code.

Hi! Welcome to IETF CodeMatch!

Here comes the short description of IETF CodeMatch, informing its goals, results so fac, etc.
