

# **SUPA Information Model**

**John Strassner, Huawei**

**Joel Halpern, Ericsson**

**Sven van der Meer, Ericsson**

**IETF96**

# Agenda

- **Motivation for building an Information Model**
- I-D Status and Open Issues
- Next Steps

# Motivation (1)

- **Information Model is independent of language, protocol, repository, and content and structure of policy**
- **Without an Information Model...**
  - Resulting data models will be silos, making interoperability difficult
  - Different types of policies (e.g., imperative, procedural, declarative, functional) will themselves be silos
  - Different actors want to author different policies using different grammars
  - No Interoperability with Chef/Puppet/, AWS Cloud Formation Templates, ...

# Motivation (2)

- **Policies are used by multiple actors**
  - App developers, operators, security and compliance teams, administrators, end-users, ... **each has different concepts and terms**
- **Policies exist at different levels of abstraction**
  - Per-port, -device, -network, -VM, -application, -service, ...
- **Different Policies exist for different operations on the same device**
  - Monitoring vs. configuration vs. audit
  - Deployment vs. backup vs. provisioning vs. billing vs. retirement ...
- **Policies focused on different technologies and vendors must be able to work collaboratively**
  - Requires a **common set of concepts and vocabulary** across domains
  - An E2E policy affects multiple actors, technologies, and vendors
- *Standardized policies help heterogeneous systems interoperate*

# Agenda

- Motivation for building an Information Model
- **I-D Status and Open Issues**
- Next Steps

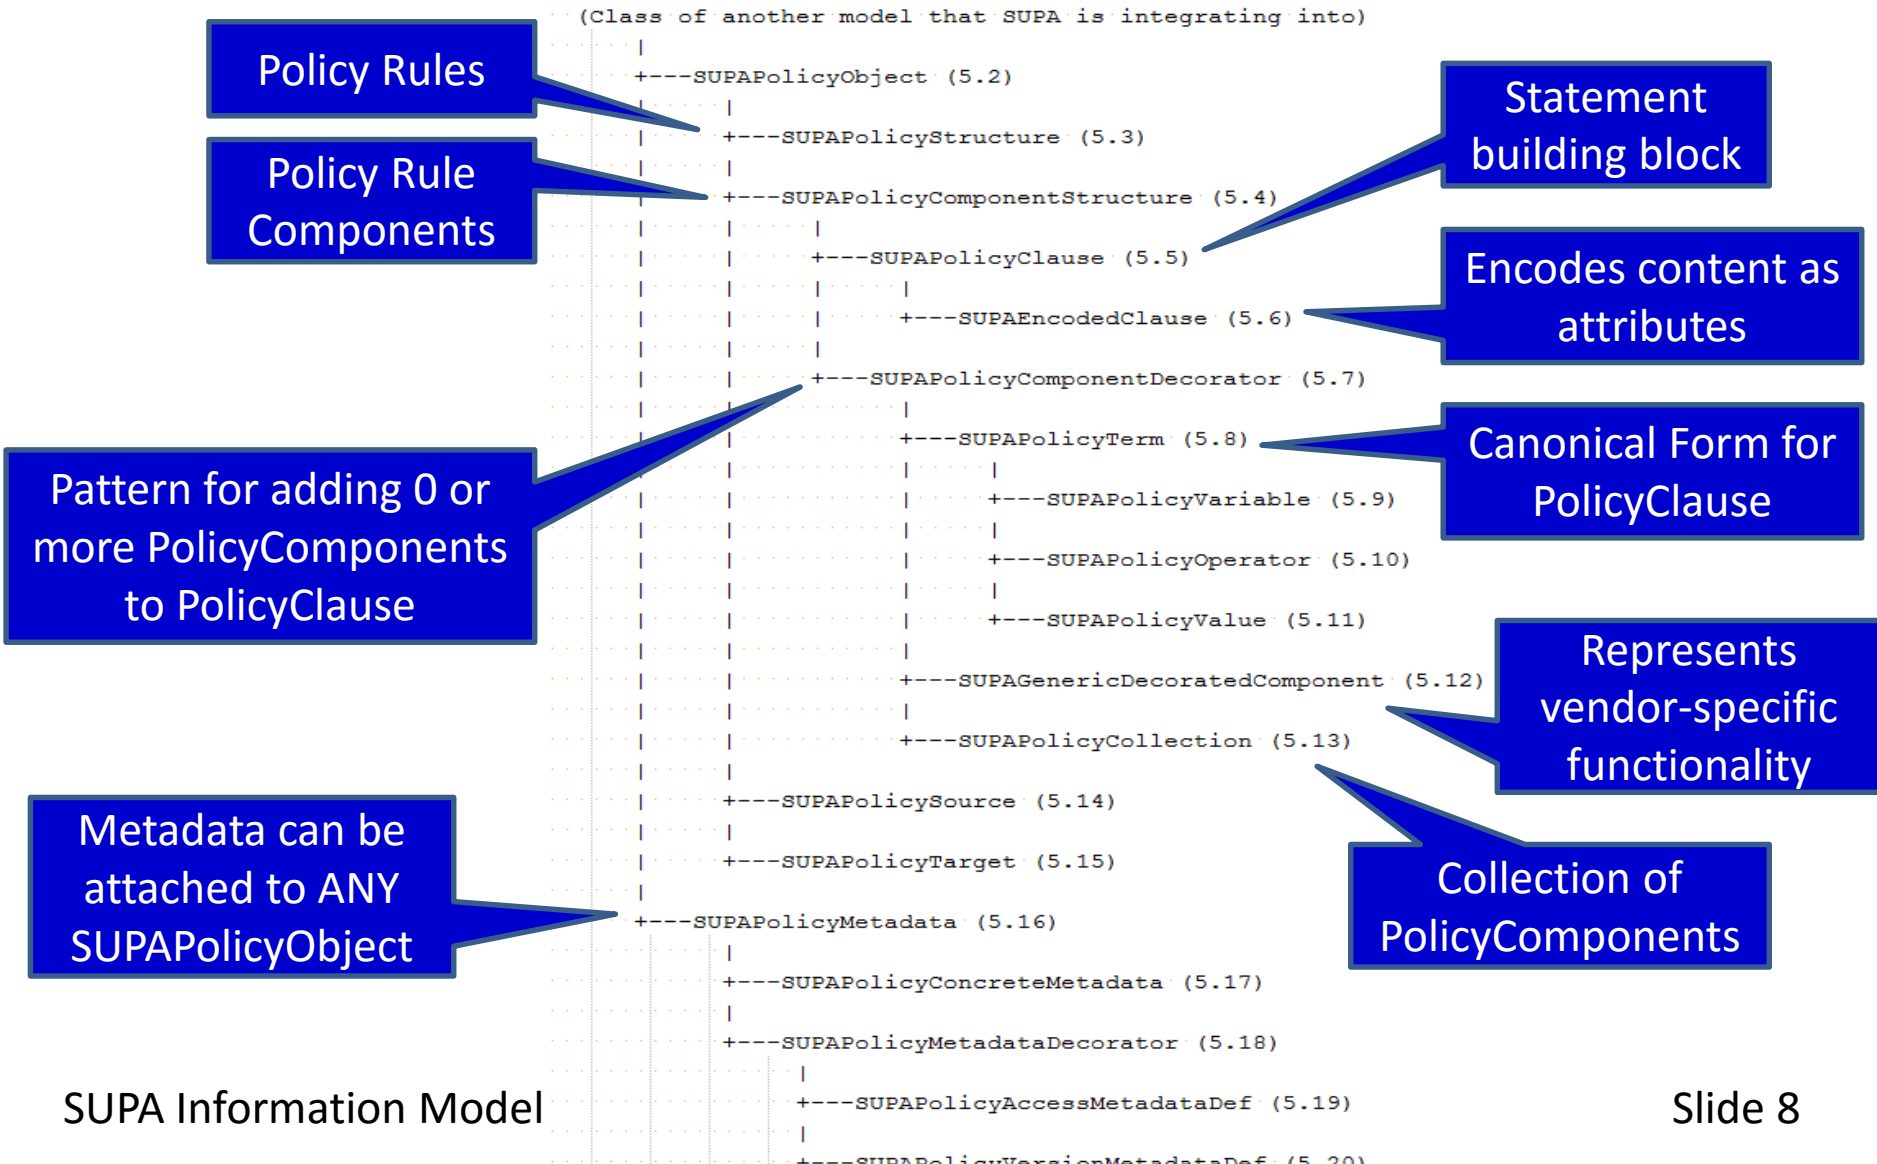

# Main Changes from -06 (Individual Draft)

- **Renamed SUPAVendorDecoratedComponent to SUPAGenericDecoratedComponent**
  - Its function was made more generic
- **Clarifications made in response to questions from the SUPA mailing list**
- **Relationship multiplicity has been fine-tuned**
  - Otherwise, class model is stable
- **Produced a **\*\*preliminary\*\*** YANG model (covered in Joel's presentation)**
- **Various additional typos have been fixed**

# Main Changes from -00 (WG Draft)

- **The Declarative Model Has Ceased To Be**
  - Even removed the Appendices
- **Introduction rewritten and clarified**
- **Redesigned SUPAPolicyVersionMetadataDef**
  - Otherwise, class model is stable
- **Added Fully Qualified Path Names**
- **Various additional typos have been fixed**
- *Content now stable*

and Actions

# Agenda

- Motivation for building an Information Model
- I-D Status and Open Issues
- **Next Steps**

# Next Steps

- **Current Work**
  - Incorporating additional software patterns
  - Working on further optimizations
  - Adding lots of examples
  
- **Feedback is Always Welcome!**
