Proposed
Concise Binary Object Representation (CBOR)
Working Group

CBOR Refresher

```
CBOR(current time):

c1                        -- Tag #1 (Date follows)
  fb                      -- Float, next 8 bytes
    41d6098aeecf5c29 -- 1478896571.24
```

- RFC 7049, many interoperable implementations (http://cbor.io)

- Data roughly JSON-shaped, no schema to parse

    - Adds binary, IEEE Floats, non-string map keys, streaming, extensibility

    - Removes edge cases in interoperability

- Compact on the wire, small parsers, nice for crypto

Needed Work

- Fix small errata, document interoperability ->
  full standard

- Easier to write specs that use CBOR,
  start with CBOR Data Definition Language (CDDL)

- Review proposals for new extensions,
  perhaps standardize
