

I2RS OPSTATE + Ephemeral State

Susan Hares

draft-hares-netmod-yang-01.txt

draft-nmdsdt-netmod-revised-
datastores-00

I2RS Implications

- Configuration Validation
 - Validation depends on Ephemeral State Definition
 - Policy set by I2RS + Implementation
- Caching of I2RS Client data
 - Can be done using multiple ephemeral Datastores

Questions

1. Should we support different types of validation
2. What Policy knobs to resolve multiple datatstore view to applied configuration view
3. What should implementers do to get more information?
