Tree Validation

- or actually -

RIPE NCC RPKI Validator 2.23
Implementation

Tim Bruijnzeels | 17 Nov 2016 | IETF 97 Seoul

Background: tree-validation

- Despite the name, this is not a generic document!
 - Happy to discuss separately..
- Informational doc on how our implementation works
- Transparency
- Get an independent review of inner workings
 - Thank you WG, especially Rob and Steve :)
 - Include concerns in document
 - But document describes what software does

Proposal

- Last Call on tree-validation-03
- Future changes:
 - Minor changes in README with releases
 - For major changes, discuss interest in SIDROPS
 - Do -bis, new document either as WG or individual
- Or.. just document with each release and get informal review at best?
