
BANANA BoF

Discussion of bandwidth aggregation and failover on multi-access networks with non-multi-access endpoints.

Coordination of various efforts underway in the IETF

Thursday 13:30, Park Ballroom 1

On the Agenda

Discussion of the problem, and points in the solution space:

- GRE tunnel bonding

- MPTCP proxy

- bare UDP experiment

Coordination with other SDOs (BBF TR-348)

Determine a way forward (does this need its own WG?
adoption in existing WGs, or work on a next BoF?)
