

YANG Tree Diagrams

draft-bjorklund-netmod-yang-tree-diagrams-00

IETF 98 Chicago NETMOD

Martin Björklund
Lou Berger

Motivation

Currently, all documents copy&paste(&change) the boilerplate text that explains the symbols used in tree diagrams. A reader has to carefully read this text to find the differences between documents.

This draft provides a single source for the definition of the tree diagrams.

Should we more strongly recommend people to use the same format?

Next Steps

- Adopt as WG document?
- Continue the ML discussion on the format changes, esp. change “ro” and “rw” to something that matches YANG semantics better.
- Add discussion about different types of trees (subtrees vs. complete modules, trees for groupings etc).
- Add more examples.
