

NVo3 1st Interim meeting: 09/11/14

Minutes:

General Discussion:

- Everyone should be on mute when they join.
- Welcome to first of three interim meeting
- The meeting is recorded and will be shared with the group
- Various logistics were discussed to better handle the virtual meeting.
- Linda has a scheduling conflict, so, may not have her presentation in todays schedule.

#1 Charter Discussion:

- WGLC was made for the updated charter.
- Received various comments. Few of important comments will be addressed

Comment 1:

- Received comments from Thomas to remove certain terms like optimization, management etc from para #1.
- Proposed resolution is to remove Optimization from the charter.
- Lucy gave her ack for the change.

Comment 2:

- Clarify Logically centralized
- Benson proposed that we should rely on PS, FW, etc. for clarification, but leave the text as it is.

Comment 3:

- Clarification on use of end device and NVE
- Proposed resolution is to leave as it is. There could be some ambiguity but it is better to leave like that.

Thomas> For the point #1, NVE has to do management and security but we are not doing. As it creates unwanted attention, want it to be removed. But better to say, it will address these topics.

Benson> Will talk it through with Alia.

Alia> Makes sense to me to.

Thomas> Why are we using end device instead of host

Benson> End device refers to physical device.

Lucy> We could clarify in the arch doc.

- There was lot of discussion of end-device NVE control plane protocol is for split NVE protocol.

- Suggested that, at this stage not to narrow down the choices but keep the broader sense for scope of the work, which could be done.

Thomas> concern is about the arch, which will have impact on the chartered items.

Thomas> End device NVE protocol should be option as it only applies in split NVE case.

- The discussion is about to work on protocol or describe mechanism.
 - Benson proposed that protocols should fulfill the mechanism for end device NVE.
 - Benson to post the charter with updates and Alia could take it up with IESG.
 - Benson and Alia have advised WG participate and get the work done and use the interim meetings to speed up the work.
- Chartered items with milestones do not correspond to a draft.

Lucy> Is OAM and management the same or will have separate milestone?
Benson> Will take a look at it.

#2 Use Case 2 Lucy:

There are three use cases described in this doc. Provided details about each use case.

Want to make WG LC soon.

Tom H> Where does the use cases for single tenant but multiple virtual networks fall?

Lucy> VN within same tenant could talk, but different tenants VN do not.
