

Inter-domain DOTS usecases

draft-nishizuka-dots-inter-domain-usecases- 02

Sep. 2016

Interim Meeting

K.Nishizuka

Status

- Proposing consolidated usecases with WG-UC in Section 5
- Will be merged into WG-UC
 - explicitly declared in abstract
- Other section could be of interest to you
 - if so, please give me a feedback

Primary Inter-domain Usecase

- will add step-by-step scenario in order to make them comprehensive to new readers of DOTS WG documents.
- which will be based on the classification of DOTS client and DOTS server (by Daniel Migault)

2 DOTS ~~relay~~ gateway usecases

- client-side gateway / server-side gateway
- will change "relay" to "gateway" in accordance with [draft-ietf-dots-architecture]
- need more detailed description

2 DOTS Recursive signaling usecases

- provider-to-provider signaling
- good examples of DOTS usecase which are trying to tackle with massive DDoS attack

DOTS Redirect signaling usecase

- lack of description of usecase based on redirect signaling
 - need input from WG

Proposed Consolidation Plan

1. Combine introduction part, classification part(by Daniel) and usecase part(this) and submit it as a revised WG-UC
 - I could help to coordinate them
2. Add detailed descriptions/scenarios
3. Add other usecases(if needed)
